

## Listpage Module

This article is designated for administrators.

### About

In the Listpage module, admins are able to create a new type of page containing a list of thumbnails with descriptions, each with links to external or internal pages.

 Note: KMS only Module. Depends on the [Theming module](#).

### Page configurations

Enable the module, and start creating your pages. Click the **Add "listPage"** button to create a new page.

#### General page settings

Here are the general configurable options available for each page:

1. **Page Title** - Use the *pageTitle* field to set the top page title.
2. **Page Description** - Set a description to show at the top of the page using the *pageDescription* field.

#### Create the List

Use the **Add placeholdersList** button to create a new line in the list called a list item, or a placeholder.

For each placeholder, the following configs are available:

1. **Title** - Set the list item title from the *title* field.
2. **Description** - Set the list item title from the *description* field.
3. **Thumbnail** - Set the list item title from the *thumbnailUrl* field. A 16:9 aspect ratio is suggested.
4. **Links** - Setup links at the bottom of the list item, using the **Add buttons** button. Enter a link and a text for each

Each such placeholder can hold many links, however three to four is the recommended number, depending on

the text of each button.

## Publish your page

Each created page will have a Path making it available for users per the Permissions set in the config:

1. **Path/URL** - Select the custom page's URL using the ***pageSlug*** field.
  - a. Enter alphanumeric only with no spaces, with special care for capital letters (recommended not to use capital letters). Signs such as *Underscore* (" \_ ") are accepted, however, do not use *Space* (" ").
  - b. The results will be a new URL in the application `https://{your_site_url}/{slug}` (e.g. Enter the slug 'help' to create a help page in the <https://mykmsite.kaltura.com/help> URL).
2. **Permissions** - Choose who can navigate to the selected page using the ***permission*** field.
  - a. The selection is of a minimum role, starting with everyone, up to a limited availability.
  - b. To allow this page for guests/anonymous users:
    - a. Set 'anonymousRole' to allow guests to view the page if your site is set to support anonymous users (set from the auth module).
    - b. If your KMS does not support anonymous users, choose 'guest override' to make this page public to all users.

 When choosing a path make sure it is available first. For example, the [Helppage](#) module provides a page in the /help path, do not use that path if that module is already used.

## Page example
